# The Prime Factors Kata

# The Requirements.

- Write a class named “PrimeFactors” that has one static method: generate.
  - The generate method takes an integer argument and returns a List<Integer>.
  - That list contains the prime factors in numerical sequence.

# Demo

Keep the bar green to keep the code clean

# Unit Testing

- test individual units
- isolate each part
- show that the individual parts are correct
- regression testing
- sort of living documentation
- executed within a framework

*[http://en.wikipedia.org/wiki/Unit\\_testing](http://en.wikipedia.org/wiki/Unit_testing)*

# xUnit Frameworks

- e.g.
- Smalltalk - SUnit
- Java - JUnit, TestNG
- .NET - NUnit, Typemock
- C++ - CppUTest
- Groovy, PHP, Python, Ruby, Scala, etc.

# Test-Driven Development

- add a test
- run all tests and see if the new one fails
- write some code
- run all tests and see them succeed
- refactor code

# The Three Laws of TDD

- You are not allowed to write any production code unless to make a failing unit test pass.
- You are not allowed to write any more of a unit test than is sufficient to fail; and compilation failures are failures.
- You are not allowed to write any more production code than is sufficient to pass the one failing unit test.

Testing is a mindset.

**You have to want it.**

# Code Coverage

comprehensiveness of tests

# Beware!

comprehensiveness  $\neq$  quality!

# Some Code Coverage Tools

- Java - EMMA, Cobertura, Clover
- .NET - NCover, PartCover
- C++ - Covtool, gcov
- Ruby - rcov
- commercial products

# Demo

# Demo

# Daily/Nightly Builds

# Continuous Integration

# Continuous Integration

- Maintain a code repository
- Automate the build
- Make the build self-testing
- Everyone commits every day
- Every commit should be built
- Keep the build fast
- Everyone can see the results of the build

*[http://en.wikipedia.org/wiki/Continuous\\_integration](http://en.wikipedia.org/wiki/Continuous_integration)*

# Immediate Feedback & Early Warning

# YOU BROKE THE BUILD!

This is Agnes and she's none too pleased with you, Bub. You broke the build. You should have known that you were making breaking changes, but you checked them in anyway.

If you start using continuous integration, Agnes won't have to come back.

# Some CI Servers

- Java - CruiseControl, Hudson
- .NET - CruiseControl.NET, Hudson (NAnt)
- C++ - Hudson (Shell/Make)
- Ruby - CruiseControl.rb
- commercial products - TeamCity, ALA

# Good Enough?

# Demo

# Check What?

- Lexical analysis
  - naming, coding conventions, design idioms
- Flow/path analysis
  - null-pointer, dead code (conditional)
- Dependency analysis
  - architectural/design flaws
- Verification
  - mathematical proof of correctness

# Some Static Analysis Tools

- Java - Checkstyle, Findbugs, PMD
- .NET - FxCop, (ReSharper, NDepend)
- C++ - (Sp)Lint
- Ruby - Roodi, Dust, Flog, Saikuro
- commercial products

# Good Enough?

# Some Code Review Tools

- Your peer (Pair Programming)
- Your version control system
- Your IDE (e.g. ReviewClique)
- commercial products
